⁺ Figures do not include NGLs and oil from nonconventional sources.

* Includes approximately one-half of Neutral Zone production.

** Includes the UK offshore, Norway, Denmark, The Netherlands offshore, and Germany offshore.

*** Does not include North Sea.

¹Includes crude oil, lease condensates, natural gas plant liquids, other hydrocarbons for refinery feedstocks, refinery gains, alcohol, and liquids produced from nonconventional sources.

Build efficient formation evaluation.

Compact™ tools deployed by coiled tubing successfully acquired data in memory mode in a difficult to access, horizontal, underbalanced exploration well. This was a case where conventional wireline operations were not feasible and pipe-conveyed logging posed a safety hazard.

Efficient reservoir evaluation means access to the high-quality data you need without compromising your operational and budgetary objectives. That's why Weatherford developed the Compact™ suite of tools and services. In addition to being ideal for all logging operations, including remote land and offshore, the system's compact size and versatility of conveyance helps reduce rig personnel, equipment requirements and operating costs. And it does so while acquiring a wide range of measurements, regardless of well condition or geometry. More options. More service. **That's Weatherford.**

The Compact™ suite offers a wide variety of resistivity, porosity and lithology, natural gamma ray, acoustic, imaging and formation pressure measurements – regardless of hole condition or well geometry.

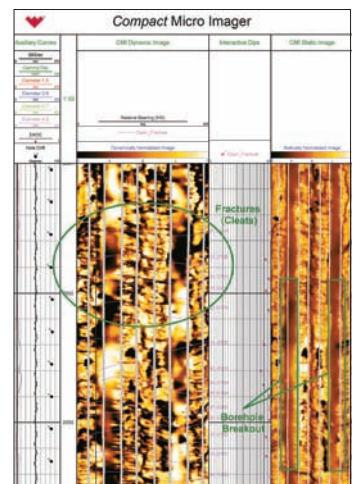

Image data obtained in a horizontal CBM (Coal Bed Methane) well with CMI on Well Shuttle.
