¹Includes crude oil, lease condensates, natural gas plant liquids, other hydrocarbons for refinery feedstocks, refinery gains, alcohol, and liquids produced from nonconventional sources.

Build better sand control.

“With over 500 successful expandable sand screen (ESS) installations, Weatherford is leading the way in improving productivity and reducing costs.”

Better sand control means the most diversified screen systems in the industry. It means the conventional well screen technology that people have been counting on for over 100 years, and the expandable completions expertise that only a company with hundreds of successful installations can provide. It means the best and most reliable screen technologies for every completion application, from expandables and zonal isolation methods to conventional well screens, inflow control technology and special application screens. That's better sand control. **That's Weatherford.**

ESS systems can dramatically reduce costs and increase productivity by up to 70 percent.

Our comprehensive systems, including inflow control technology, and service expertise provide a clear decision path to the right solution.
