⁺ Figures do not include NGLs and oil from nonconventional sources.

* Includes approximately one-half of Neutral Zone production.

** Includes the UK offshore, Norway, Denmark, The Netherlands offshore, and Germany offshore.

*** Does not include North Sea.

¹Includes crude oil, lease condensates, natural gas plant liquids, other hydrocarbons for refinery feedstocks, refinery gains, alcohol, and liquids produced from nonconventional sources.

Build more accurate control.

The Secure Drilling system makes previously undrillable wells drillable:

- Enabled HPHT exploration well to reach TD for the first time after 8 failed wells (Mediterranean Sea).
- Enabled drilling to depths never reached previously when drilling conventionally (offshore Libya).

More precise wellbore pressure management. That's the ultimate benefit you get from the Secure Drilling system. Improved accuracy of measurement and analysis for flow and pressure data allows drilling decisions to be made based on actual real-time data.

The system also features a simple yet flexible design, making it adaptable to virtually any well – even ones previously thought to be undrillable.

Better control means reduced risk and decreased downtime, combined with increased safety and significant flexibility.

It's not just managed pressure drilling—it's secure drilling.

To learn more about how you can build more accurate control with the Secure Drilling system, view our webcast at weatherford.com/mpd.
